THE PATTERDALE PEWTER FLAGON.

*Phot. by J. F. Curwen.*

TO FACE P. 222

ART. XI.—*The Patterdale Pewter Flagon.* By JOHN F. CURWEN, F.S.A.

SINCE about the twelfth century the laity of the Roman Catholic Church have only received Holy Communion in one kind. The chalice was withheld from them as a matter of Church discipline (St. Thomas, *Summa* III, Cap. 80, Art. 12) and the reasons must have been great to counterbalance the opposition which finally led up to the Hussite Wars of Reformation in Bohemia and the disunion of the Utraquists. We can therefore dismiss at once any question of a pre-Reformation date.

James I, in the 20th Canon of 1603-4, ordained that wine was "to be brought to the Communion Table in a clean and sweet standing pot or stoop of pewter, if not of purer metal"; and it is fairly safe to assume that few churches were in a position to procure any material other than pewter, which was at once the cheapest and most easily procurable.

The Patterdale Terrier of 1749 gives: "Imprimis one Pewter Flaggon Two Pewter Plates one Paten Item one Silver Chalice with the cover weighing about 12 ounces." The Terrier of 1867, however, only mentions "One set of Communion Plate in silver." Between these two dates, viz. in 1850, the Greenside Mining Company made an offering to the Church of sufficient "Helvellyn silver" to fashion into new vessels. Now at this time lived one John Walton, who prided himself upon being the dirtiest man in Patterdale, so much so indeed that in his will he left instructions for his body to be buried in the same state (Rev. W. P. Morris, *Records of Patterdale*, p. 99). Besides being a waller and joiner he was also a tooth-puller, a tinsmith and a tinker, so that it is not surprising to learn that in some way or other he became possessed

of the pewter flagon. We next hear of it at an auction sale held in a cottage at Hartsop, soon after the time of his death in 1892, when the sacred vessel was purchased by A. B. Dunlop, Esq., who now has the satisfaction of returning it, at the suggestion of Col. Weston, to the church.

Chaffers tells us that the earliest flagons, of the time of Queen Elizabeth, were fashioned into round bulbous bodies, but that about the year 1600 the tankard type came into vogue. So here we find our flagon standing nine-and-three-quarter inches high or eight-and-three-quarters to the lid. From a plain ovolo base of six inch diameter and through a very flat double-ogee band, the sides taper upwards with a perfect entasis to the top, which, at four inch diameter, is just curved outwards without any spout or ball-like drip. The lid is beaten up or domed in two curves without any knob; the thumb-piece resembles a fern frond and the front edge is simply ornamented with serrated cuts. The massive handle, which projects four inches, is merely soldered on the body without any intervening patera, and on it we find the initials T.D. as the only mark. It is this perfect simplicity which stamps it as a vessel of the early seventeenth century; a dignity of form, an absence of extraneous decoration and a rightness of proportion that are quite lacking in flagons of a later date. Tampering with the natural integrity of the plain surfaces by chasing or embossing in high relief was rarely met with during the best period, when the craftsmen made their ware for use and designed them for easy and wholly efficient cleansing.

That it bears no mark of quality beside the initials T.D. may seem to be at first sight in contravention of the various statutes which enact that every maker should "set his mark upon all plate before setting it to sale" but church plate, if ordered to be made, had no need to be set for sale and being consecrated to church use was

considered as incapable of being re-sold (R. S. Ferguson, *Old Church Plate*, p. 17).

The flagon weighs 3 lbs. 9 ozs., and holds four pints. To our modern ideas this will appear of great size, but it must be remembered that, in the smaller churches at least, the Sacrament was only administered at rare intervals and that a certain amount of civil disability attached to those who did not then communicate. A large congregation more content with a sup than a sip would therefore render the size somewhat necessary.

It is very desirable that pewter vessels which have been used for the purposes of Holy Communion should be carefully preserved, even when their place has been taken by silver utensils; there is a temptation to neglect them as of no value; but there is much of historical interest attaching to these pewter vessels, and they deserve a place in the treasury of the parish to which they belong. (Bishop Goodwin's Pastoral, Christmas, 1880, p. 15).

Peter Spencer Davies a knowledgeable Pewter Collector tells us that -

The flagon is also illustrated on p 181 of the article by Michael Finlay : The Pewterers of Penrith, Transactions of the Cumberland & Westmorland Antiquarian & Archaeological Society LXXXV 1985 pp163 – 186, and is probably by William Cookson IV, and dates probably to c 1690-1700 i.e. a bit later than suggested in the original article.

Coal Mining information and connections of these Cooksons can be found at –

Or Googling Windy Hill Colliery

[http://www.mining-memorabilia.co.uk/The\\_Tokens\\_%20Of\\_%20Windy\\_Hill\\_Colliery.htm](http://www.mining-memorabilia.co.uk/The_Tokens_%20Of_%20Windy_Hill_Colliery.htm)

A William Cookson of Penrith was a grandfather of Wordsworth the poet.

Another article indicates this pewter Flagon was presented to the Church in 1700
